Specification

The disclosure is objected to because of the following informalities: The equations on pages 5, 8, 9 and 13 are not in a printable form, see US Pre Grant Publication 2003/0154440 paragraphs [0028], [0029], [0046], [0050], [0071] and [073] (it appears that “**b**” and “**g**” should have been “(“ and “)” respectively).

Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-9 are rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential structural cooperative relationships of elements, such omission amounting to a gap between the necessary structural connections. See MPEP § 2172.01. The omitted structural cooperative relationships are: applicant's claims 1-9 recite plural subfilters, but fails to recite how these subfilters are to be connected to form a useful invention, in other words, applicant has claimed a collection of disconnected parts (subfilters).

Allowable Subject Matter

Claims 10-20 are allowed.

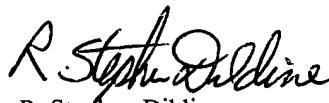

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Tezuka shows, in Fig. 5, a Reed-Solomon encoding device having two interconnected subfilters (6-7, 10-11, 14-16, 20-21 and 8-9, 12-13, 17-19, 22-23) but not in a multi-rate coding device. Shah et al. show Reed-Solomon coding in general and Berg et al. show faster architecture for Reed-Solomon codes.
